**Question 1**

Partially correct

Mark 1.00 out of 2.00

Consider the above NFA.

Select the states which are included in the set  $\delta^*(1, abab)$ ?

Select one or more:

- ☒ a. 4 ✓
- ☐ b. 3
- ☐ c. 1
- ☐ d. 2

**Question 2**

Partially correct

Mark 0.50 out of 1.00

Let  $L$  be a regular language on  $\Sigma^*$ , and let  $n$  be a positive integer. If there are  $n$  strings in  $\Sigma^*$  such that any two of them are distinguishable w.r.t.  $L$ , then which of the following statements is/are true?

Select one or more:

- ☐ a. There exists a finite automaton that recognizes  $L$  with fewer than  $n$  states.
- ☒ b. Every finite automaton that recognizes  $L$  has at least  $n$  states. ✓
- ☐ c. There exists a finite automaton that recognizes  $L$  with exactly  $n$  states.
- ☐ d. Every finite automaton that recognizes  $L$  should have more than  $n$  states.

**Question 3**

Partially correct

Mark 1.50 out of 3.00

Suppose  $M_1=(Q_1, \Sigma, q_1, A_1, \delta_1)$  and  $M_2=(Q_2, \Sigma, q_2, A_2, \delta_2)$  are Finite Automata (FA)s that accept languages  $L_1$  and  $L_2$  where  $L_i \subseteq \Sigma^*$ . Then which of the following is/are true?

Select one or more:

- ☐ a. There is no such a FA,  $M$  that accepts the language  $L_1 \cap L_2$
- ☒ b. There is an FA,  $M$  that accepts the language  $L_1^*$  ✓
- ☐ c. There is no such an FA,  $M$  that accepts the language  $\Sigma^* - L_1$
- ☐ d. If  $x \in \Sigma$  then there is an FA recognizing  $\{x\}$

**Question 4**

Correct

Mark 2.00 out of 2.00

Select one or more correct statements about this FA

Select one or more:

- ☒ a. The language accepted by this FA has infinite number of strings. ✓
- ☐ b. If a given string X halts in state B (after all the transitions), Then all strings generated through the regular expression  $Xb^*a$  are accepted by this FA.
- ☒ c. All strings generated through regular expression  $b^*a^+b$  are accepted by the above FA. ✓
- ☐ d. Assume that a string X is accepted by this FA. (X consists of 'a' s and/or 'b' s). Then Xaba is also accepted by this FA.

**Question 5**

Partially correct

Mark 0.67 out of 2.00

Consider the NFA  $M=(Q, \Sigma, q_0, A, \delta)$  with  $A=\{q_2, q_7, q_9\}$ .

Which subset of states in the NFA is a possible accepting state in the equivalent DFA?

Select one or more:

- ☐ a.  $\{q_4\}$
- ☒ b.  $\{q_2, q_7, q_9\}$  ✓
- ☐ c.  $\{q_5, q_8\}$
- ☐ d.  $\{q_6, q_7\}$
- ☐ e.  $\{q_1, q_2, q_3\}$
